

**WHAT IS CLAIMED IS**

1. A small memory card with a monitor to be set in an electric device,  
comprising :

5 A substrate having an upper surface and a lower surface, the upper surface  
formed with a plurality of connected points and a plurality of golden fingers  
electrically connected to the plurality of connected fingers, the substrate arranged  
in the electric device, so that the plurality of golden fingers may be electrically  
connected to the electric device; and

10 At least one memory chip, which is arranged on the upper surface of the  
substrate, electrically connected to a plurality of connected points.

At least one monitor arranged on the side of the upper surface of the  
substrate, so that the aspect and location of the plurality of golden fingers may be  
recognized.

15 2. The small memory card with a monitor according to claim 1, wherein the  
monitor is LED, which is arranged on the side of the plurality of golden fingers of  
the substrate.

3. The small memory card with a monitor according to claim 1, wherein the  
glue layer is transparent.

20 4. The small memory card with a monitor according to claim 1, wherein the  
monitor is revealed out of the glue layer.

5. The small memory card with a monitor according to claim 1, wherein the memory chip is electrically connected to the plurality of connected points of the substrate by a plurality of wires.

6. A small memory card with a monitor is arranged in an electric device,  
5 comprising:

A substrate formed with an upper surface and a lower surface, the upper surface formed with a plurality of connected points and a plurality of golden fingers electrically connected to a plurality of connected points, and the substrate is used to arrange in the electric device, so that the plurality of the golden fingers  
10 of the substrate may be electrically connected to the electric device;

At least one memory chip;

At least one monitor, the monitor is arranged on the side of the upper surface of the substrate, so the aspect and location of the plurality of golden fingers may be recognized.

15 7. The small memory card with a monitor according to claim 6, wherein the monitor is LED, which is arranged on the side of the plurality of golden fingers of the upper surface of the substrate.
